

Hello, my name is Chonsith Satiernutai, but you can call me Tee. I am currently a third-year Computer Science student at Kasetsart University, Bangkok campus.

I'm applying for the Full Stack Developer position because I'm truly passionate about end-to-end software development, and I've been continuously building my skills across both frontend and backend technologies.

On the frontend, I have hands-on experience building web applications using React, Next.js, and Tailwind CSS, as well as mobile apps with Flutter. I'm also comfortable using Figma, which helps me collaborate seamlessly with UI/UX designers.

For backend and databases, I have strong programming foundations in Python, Java, and C++. I can design and manage relational databases using SQL, and I have experience working with MySQL, Supabase, and Firebase.

A project I'm particularly proud of is 'KU-Sport,' a mobile application built with Flutter. It allows students to check real-time sports field availability and book them directly. I integrated a scan-to-pay system for instant booking confirmations and added a feature for requesting sports equipment loans. This project gave me valuable experience in delivering a complete.

I'm confident that my technical skills and dedication will allow me to contribute effectively to your team. I'm also very eager to learn new technologies from experienced senior developers in a real-world environment. Thank you for this opportunity, and I look forward to the possibility of working together.
